

AUTOBAHN A9 - GREDDING, GERMANY

PROJECT DESCRIPTION

FORTA-FI[®] was used in **two test sections of the Autobahn "A9"**, the federal controlled access highway system near Greding, between Munich and Nuremberg. **Researchers wanted to test a 5 cm thick application of FORTA-FI[®] in the deceleration and acceleration lanes** - the on and off ramps - of the highway where drivers would practice constant hard breaking and fast accelerations.

KEY POINTS

- Resist Rutting & Shoving
- Reduced Cracking
- Increase Surface Durability
- Extend Pavement Life

DETAILS

Date: August 2017

Location: Greding, Germany

Fiber: FORTA-FI[®]
