

Millwright Building

Date: 2016

Location: Minneapolis, MN

Advantage: Saved Time and Money

Technical Specifications

Application: Slab-on-Metal Deck

Fiber Reinforcement: FORTA-FERRO[®] 2-1/4"

Dosage: 4.5 and 7.5 lb/cu yd

Finishing Method: Exposed Concrete

In this project, two different dosages were being used as a case study for the long-term performance of **FORTA-FERRO**. Additionally, the owner and engineer saw a **reduction in time** needed to complete the project by **eliminating the need to install mesh/accessories** in their slabs. FORTA-FERRO's consistent performance proved to the contractor that it was **the best choice** for their project.

"We believe that these fibers help to increase the performance of the slabs by reducing the scope of shrinkage cracking". – Project Contractor
