

FORTA[®]

REINFORCEMENT THAT LASTS[™]

ONLY FORTA-FI® WILL DO:

WHY THE ORIGINAL STILL LEADS THE WAY

DOTs and producers are facing costly setbacks from fiber substitutes that claim to be “the same” as FORTA-FI. But the results are in: **they’re not.**

WHEN IMITATIONS ARE USED, THE CONSEQUENCES ARE REAL.

Imitations lead to early failures, higher maintenance costs, and eroded trust. With the right materials, pavements deliver longer life, lower costs, and lasting confidence.

PROVEN PERFORMANCE.

Backed by decades of testing and trusted on countless projects, it consistently delivers stronger pavements, extended service life, and lasting value.

PATENTED, LOOSE ARAMID FIBER.

Only FORTA-FI offers a patented blend of aramid and polyolefin fibers in a loose form. This unique design ensures superior dispersion and uniform distribution for consistent performance.

BACKED BY DATA.

With over two decades of proven performance, FORTA-FI is supported by case studies from DOT and municipal projects nationwide. Agencies that know the difference continue to choose FORTA again and again.

FORTA-FI is the ONLY aramid fiber product designed, tested, and proven to consistently deliver these results.

SIMILAR FIBERS DON'T DISPERSE, DON'T LAST—AND DON'T COMPARE.
