

Fulfillment Center

Date: 2019

Location: Grand Rapids, MI

Advantage: Superior Finish,
Increased Durability,
Reduced Cracking

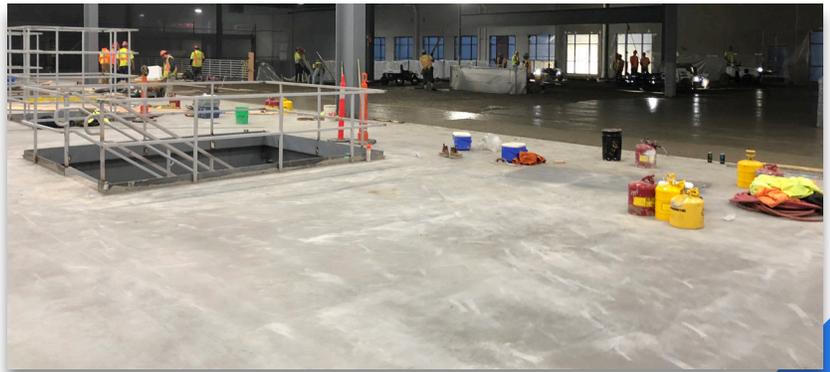

Technical Specifications

Application: FORTA-FERRO[®] 2-1/4"

Fiber Reinforcement: Composite Metal Deck

Dosage: 7.5 lb/cu yd

This large shipping center specified fibers to reinforce their warehouse floors because of their proven performance. **FORTA-FERRO** macro synthetic fibers in the composite metal decks of this warehouse. Engineers chose FORTA-FERRO fibers instead of steel reinforcements to **provide additional flatness to the floors**. The fibers will also **reduce cracks** and the size of cracks in the slab. The fewer and smaller the cracks, the **more durable and longer lasting** the floor. The company chose FORTA-FERRO fibers for reinforcement because their business is dependent on no delays or breakdowns on the floor.
