## Technical Specifications

**Fiber Reinforcement:** FORTA-FI<sup>®</sup>

**Construction Type:** 2" Mill & Fill

**Replaced:** Polymers

**Delivery Method:** FORTA Voyager

The New York Department of Transportation (NYDOT) used FORTA-FI to reinforce I-81, both north and south lanes, between mile markers 74.2 and 81.7. This mill and fill project included 40,000 lb. of FORTA-FI in the wearing course.

The **FORTA Voyager** fiber feeder was used at the asphalt plant to add the fiber to the asphalt mix with no problems. With this being a high-volume road, NYDOT chose to reinforce the interstate with FORTA-FI to **reduce cracking** and **increase the life of the roadway**.
