FORTA*fied*[®]

Technical Specifications

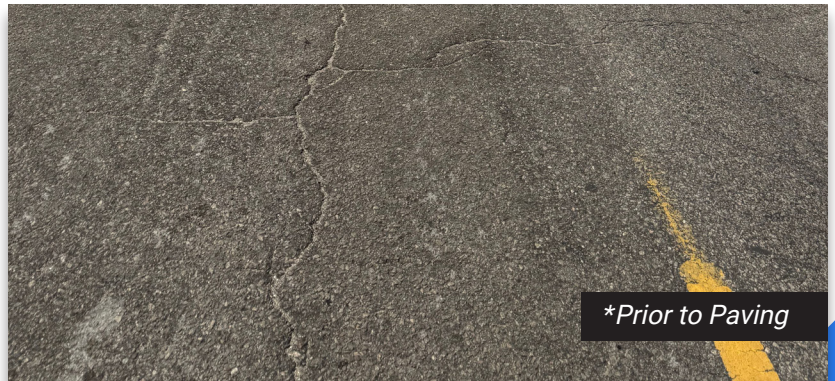

Fiber Reinforcement: FORTA-FI[®] X2

Application: Mill & Fill

Overlay Thickness: 1.75"

Total Project Size: 3,000 ton

Delivery Method: FORTA[®] Voyager

**Prior to Paving*

A **1¾-inch mill and fill on Waccamaw Drive**, this South Carolina DOT two-lane roadway project used **FORTA-FI X2** to address cracking and water damage in pavement more than **20 years old**. With the roadway subject to ongoing traffic demands, X2 was a strong fit for the application. By helping to **reduce cracking, extend service life, and improve overall pavement durability**, the fiber supported a longer-lasting repair and helped protect the value of the roadway investment.
